For frontend testing we decided to use Jest and React Testing Library to test the input/output and to simulate user interactions and dom changes. For this, we only tested sprint 3 features that were implemented/changed, as well as extra features that are crucial to our implementation.

```
Test Suites: 10 passed, 10 total
Tests:       45 passed, 45 total
Snapshots:   0 total
Time:        2.182 s
Ran all test suites.
haseebafzal@MacBook-Pro-2 client %
```

This is the coverage graph that was returned after running ‘npm test’ in the client folder. All tests are stored in @/client/tests. This graph shows all the files we tested as well as their statement and branch coverages. In this case we can see that the coverage for everything is >=70%, this is because we covered all edge cases and went over the critical paths.
