

Reflection

Compared to sprint two, sprint three had a noticeably slower start and lower velocity in general. A large part of this can be attributed to the fact that there was a shift in focus compared to the previous sprint. Sprint three was more focused on testing, which isn't something we attributed to stories for the sprint. Our group prioritized making significant progress on the frontend and backend tests. Aside from that, at the end of sprint two, we evaluated parts of our project and decided we weren't as happy with the map component. This led to us refactoring it completely during this sprint, to better match our initial scope and goals, including things like aesthetic appearance and performance. That refactoring took up a large part of the sprint, but wasn't something we attributed to a story for sprint three since we already had it as an existing story before and were simply refactoring it.
