

Team Expectations Agreement¹

Team work isn't always easy. When working in a team, problems occasionally arise. One source of problems is the differing expectations of team members. For example, one person may think that an email response should come within 2 hours, while another may think that 2 days is acceptable. But when teams work and communicate well, the benefits more than compensate for the difficulties

A first team meeting, create a Team Expectation Agreement. In the space below, put down the list of agreed-upon rules and expectations you agree as team to adopt. Include guidelines for the following:

- **methods of communication (email, phone, messenger, text, . . .)**

We will communicate over slack most of the time, otherwise we will use discord. We have each others phone numbers for emergency situations

- **communication response times (email, phone, messenger, text, . . .)**

On Slack, we expect to receive responses on the same day with some leniency when applicable. For more urgent matters, we will use personal communication such as Discord to get a quicker hold of one another.

- **meeting attendance (when to meet, whether all meetings are mandatory, . . .)**

TBD

- **running meetings (when, where, face-to-face vs. online, who takes minutes, . . .)**

Online meetings on slack, all group members take turns to talk about what they have done and what they will complete for the next standup meeting

- **meeting preparation (whether preparation is needed, what to prepare, . . .)**

For each meeting, every person should prepare a list of the things that they have done from the last standup meeting to ensure they are on the right track

- **version control (what to/not to commit, content of log messages, . . .)**

We will use many feature branches on Git to ensure version control and to avoid conflicting commits. Our commit names should be named appropriately and we should follow best Git practices to ensure we stay organized. We should not commit untested code into main feature branches or main in order to avoid breaking our product. As stated earlier, ensuring best practices will avoid many of the issues described above.

- **division of work (how to divide work, who will decide who does what, . . .)**

During our meetings, we will come together to talk about what everyone's preferred task is, then we can equally partition the tasks based on preferences.

- **submitting assignments (when to submit, who will submit, who will review the submission, ..)**

- **contingency planning (what if a team member drops out, what if a team member consistently misses meetings, what if a team member is academically dishonest, . . .) We suggest that in these cases, team promptly seeks help from the instructor. It is important not to let such situations escalate.**

The list above is just to get you started. Feel free to modify as you wish. Make your expectations fairly thorough without being unrealistic. If you had any team problems in the past, think about what went wrong and how expectations can be set to prevent those types of problems.

We accept these guidelines and intend to fulfill them (sign below):

Haseeb Afzal

Zohair Syed

Mohamed Ibrahim

Ousman Jikineh

Adeeb Nawshad

Review the guidelines with your TA and decide which member of your team will keep this form. In the event of team disagreements, you may be asked to show this form to your instructor.
